

# ListenTree//SouthByTree

Gershon Dublon + Edwina Portocarrero

## KIT CONTAINS

2 Weather-proofed Transducers  
1 Mini USB DAC + USB cable(for power)  
1 Muse Amplifier + 12V charger + 1/8" TRS  
1 RaspberryPi + Memory Card with pre-loaded audio +  
MicroUSB Cable (for power)  
1 USB to wall charger  
Alcohol swipes

\*\*\*\*YOU WILL NEED A DRILL\*\*\*\*

## INSTRUCTIONS

1- Sterilize your drill bit and the transducer screws with included alcohol swipes.  
1- Find an even surface on the base of the tree under the soil and drill a pilot hole (much smaller than the diameter of the screw on the transducers).  
2 - Carefully screw the transducer in until firmly in place minding the size of the tree (the silicone does not have to be against the tree if the tree is small).  
3 - Plug the Raspberry Pi to the DAC to the AMP to the Transducers using all the attached cables.  
4 - Raspberry Pi should boot automatically and audio should too (on loop)!!

\*\*\*\*\*VOILA!\*\*\*\*\*

## AUDIO CREDITS
